

Office Group

Mutual Disclosure: Haul Check ensures privacy and controlled visibility through mutual disclosure, allowing earthmovers to connect efficiently while protecting sensitive information.

Office Groups are private networks within Haul Check where company team members can collaborate on bid and project sites, automatically matching internal bids and projects for maximum efficiency.

Bid Searches are invisible to outsiders, only searching CityNet for potential matches, ensuring bids remain undiscoverable.

Project Posts are anonymous outside the Office Group, sharing material needs while keeping identity and location hidden until a match is made.

SuperBlast Posts maximize visibility by forming two-way connections with CityNet posts and one-way connections with all unposted matches.

Sponsored Sites are sites pre-populated in Haul Check to help satisfy your material imbalances.
